

GUIDANCE ON THE USE OF RAPID DIAGNOSTIC TEST STRIPS

Shenzhen Zhenrui Biotech Co.,Ltd. was established in 2013 as a National High-tech Enterprise, foucusing on product research and development in the field of disease diagnosis. It mainly provides immunology and molecular biology in vitro detection reagents and related services.

Since the establishment of the company, it never give up pursuing "professional and experienced technical capabilities", "focusing on research and development continuously", "realizing the production capacity of high-quality products". Zhenrui has been committed to transforming advanced technology and corporate experience into high-quality products and envices, providing users with a full range of solutions to help users improve the level and ability of disease diagnosis and prevention.

INTRODUCTION

Shenzhen Zhenrui Biotechnology Co.,Ltd. is a hightech enterprise focusing on the research, development, production, and sales of biomedical in vitro diagnostics, food safety testing, and supporting equipment.

The company is committed to providing more accurate and efficient infectious disease detection reagents for the public health field; committed to providing complete and convenient animal husbandry disease diagnosis and epidemic prevention detection reagents for the animal husbandry industry; providing reliable infectious disease diagnostic reagents for companion animals; for food safety testing provides high-quality and rapid testing reagents.

The company operates in strict accordance with GMP standards and ISO9001 quality management system and has departments for research and development, production, quality control, finance, domestic sales, foreign sales, procurement, and warehouses.

The products are well received by users at the domestic and overseas market and established friendly cooperation models with distributors in Southeast Asia, Europe, Japan, South Korea, Southeast Asia, and the rest of the world market.

66 Professional

Zhenrui provides our customers with high-quality products and services with its "professional and experienced technical capabilities", "continuous focused research and development" and "realizing the production capacity of high-quality products".

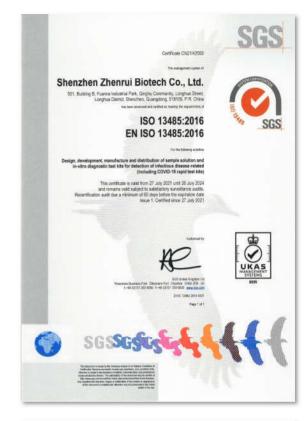

The company has established technology platforms for enzyme-linked immunoassay, nanoparticle chromatography and molecular biology detection.

The products cover the three major product lines of ELISA, colloidal gold, and PCR, which also cover the antigen and antibody detection products of various animal diseases such as pigs, poultry, ruminants, pets, aquatic animals, etc., which is the most complete product line in the industry One of the companies that can meet the needs of customers for different diagnostic reagents.

As one of the companies own most complete product line in industry, Zhenrui can meet the needs of customers for different diagnostic reagents. The product performance has been comprehensively evaluated by a number of high-level experiments and has been unanimously affirmed.

CERTIFICATE

THREE TECHNOLOGY PLATFORM REAGENTS

We have developed more than 50 ELISA test kits, covering almost all common animal diseases. According to different applications, we use indirect method, sandwich method, competition method, blocking method and other modes, especially the blocking method kit established by monoclonal antibodies, which effectively solves the problem of multiple interference factors and specificity in the detection of animal disease antibodies.

Colloidal gold chromatography rapid test card

We have developed more than 50 types of rapid detection cards for colloidal gold chromatography. In particular, the antibody rapid test card used for the evaluation of the immune effect of economic animals and the antigen test card used for rapid diagnosis have been recognized and welcomed by different groups of customers due to their convenient, rapid and accurate characteristics.

Antibody Titer Colorimetric Chart

We have developed more than 60 kinds of fluorescent quantitative PCR detection reagents. This series of reagents uses high- efficiency A-MLV reverse transcriptase and hot-start Taq DNA polymerase to prepare a one-step RT-PCR amplification system, which can quickly check for the presence of animal disease pathogens within 2 hours.

GUIDANCE ON THE USE OF RAPID DIAGNOSTIC TEST STRIPS (DOG)

Gastrointestinal tract

Main clinical symptoms

Vomiting, diarrhea

Optional test strips

- CPV Ag
- CCV Ag
- GIA Ag
- RV Aa
- Lyme Ab

Heart

Main clinical symptoms

- Cardiac hypertrophy, myocarditis, heart failure **Optional test strips**
- CHW Ag
- To Ab

Ear

Main clinical symptoms

Redness of the auricle

Optional test strips

• IgE Canine allergen testing

Face

Main clinical symptoms

Redness

Optional test strips

• IgE Canine allergen testing

Eye

Main clinical symptoms

- Increased eye feces
- Conjunctival redness
- Blue cornea, edema
- Visible pale or yellowish mucosa

Optional test strips

- CDV Aa
- IgE Canine allergen testing
- To Ab

Nose

Main clinical symptoms

Runny nose

Optional test strips

- · CIV Aq
- CAV Aa
- To Ab

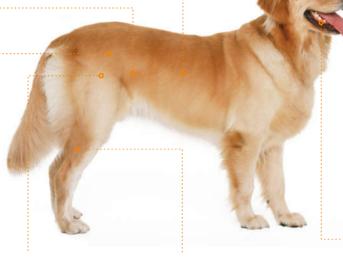

Body surface

Main clinical symptoms High fever

Optional test strips

- CDV Ag
- CIV Ag
 CAV Ag
- To Ab
- Lep Ab

Skin

Main clinical symptoms

■ Pale skin, that is, anemia

Optional test strips

- CPV Ag
- CHW Ag
- To Ab

Main clinical symptoms

· Coat is rough, even falling off, skin thickening lesions

Optional test strips

LSH Ab

Limbs

Main clinical symptoms

 Redness and swelling, especially on the feet

Optional test strips

• IgE Canine allergen testing

Main clinical symptoms

 Lameness, inflammation and swelling of joints

Optional test strips

Lyme Ab

Oral cavity

Main clinical symptoms

Difficulty breathing

Optional test strips

- CIV Ag
- CAV Ag
- CHW Ag
- To Ab

GUIDANCE ON THE USE OF RAPID DIAGNOSTIC TEST STRIPS (CAT)

Oral cavity

Main clinical symptoms Stomatitis, gingivitis

Optional test strips

■ FIV Ab

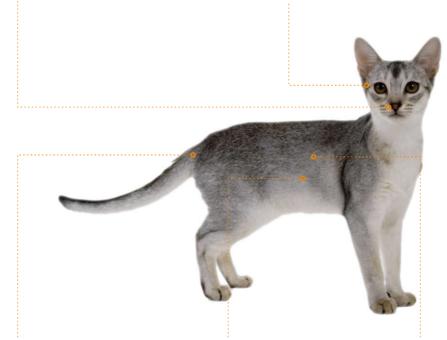

Eye

Main clinical symptoms

■ Eye disease

Optional test strips

• FIP Ab

▶ Body surface

Main clinical symptoms

Increased body temperature

Optional test strips

- FPV Ag
- FIP Ab

► Gastrointestinal tract

Main clinical symptoms

Vomiting, diarrhea

Optional test strips

■ FPV Ag

Skin

Main clinical symptoms

- Pale skin, that is, anemia

Optional test strips

- FeLV Ag
- FCV Ag
- FIV Ab ■ FIPAb

PHYSICAL EXAMINATION

Total IgE Canine Allergen Test Allergic dermatitis is the most common canine allergies. Elevated IgE in serum is the most effective indicator of allergic diseases. Canine total IgE antibody rapid detection card adopts immunochromatographic detection technology to detect IgE immunoglobulin in canine serum and plasma.

Provide materials: Test Device、Dilution Buffer、Capillary sampling tube、Dropper、Instruction.

Features: Fully equipped, simple operation, fast presentation

Cat and dog Toxoplasma antibody detection Toxoplasma gondii is a zoonotic parasitic disease, and its pathogen is Toxoplasma gondii (Toxoplasma gondii), which can be transmitted to humans by cats, dogs and other animals that carry the worm. It often causes eye and brain damage. Infecting pregnant women (animals) may also cause teratogenesis or even abortion.

Cat and dog Toxoplasma antibody gold-labeled rapid detection card uses rapid immunochromatographic detection technology to detect Toxoplasma antibody (total antibody) in whole blood and serum of cats and dogs, which can assist in the diagnosis of Toxoplasma gondii infection and help early Protection.

Test sample: cat, dog whole blood, serum

Features: one-step detection, convenient and fast; high sensitivity and specificity

Evaluation of Rabies Immunity

The rabies virus antibody rapid test card can detect the level of rabies virus antibodies in dogs, thereby helping to determine whether the rabies disease vaccinated by the dog has produced protection.

Test sample: serum, plasma

Provide Materials: Test Device Neutralization Reaction Tube Dilution Buffer **Features:** Simple operation and quick results; Monoclonal antibody blocking method, higher accuracy

INSECT VECTOR PRODUCTS

Test sample: Whole blood, serum or plasma

Provide Materials: Test Device, Dropper, Dilution Buffer

Catalog Number	Product Name	Test purpose	Sensitivity	Specificity
FZCC023-10	Rapid Anaplasma Ab test kit	Anaplasma Ab	97.0%	96.0%
FZCC024-10	Rapid Lyme Ab test kit	Lyme Ab	97.1%	97.0%
FZCC018-10	Rapid CHW Ag Test Kit	CHW Ag	98.6%	97.4%
FZCC017-10	Rapid Leishmania Ab Test Kit	Leishmania Ab	98.7%	97.3%
FZCC026-E10	Rapid Babesia Ab test kit	Babesia Ab	99.0%	98.0%
FZCC027-E10	Heartworm/Ehrlichia/Anaplasma Combined Test kit	Heartworm/Ehrlichia/Anaplasma Combined	97.5%	96.3%
FZCC028-E10	Heartworm/Ehrlichia/Leishmania/ Anaplasma Combined Test kit	Heartworm/Ehrlichia/Leishmania/ Anaplasma Combined	97.4%	98.0%

Test steps:

▶ Note: For the sample volume specified in the instruction manual, the black line on the capillary represents 10µL.

(addition of too much or too little sample will produce wrong results, so strictly follow the specified sample volume ($10\mu L$).

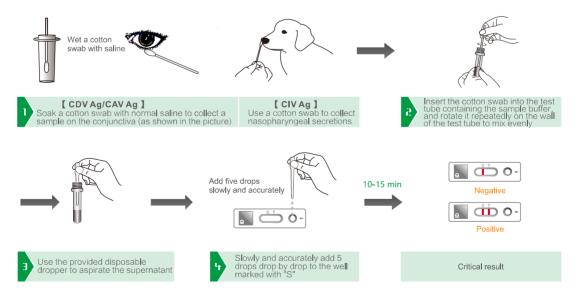

Test sample: Conjunctiva (CDV Ag、CAV Ag), Nasopharyngeal fraction exosomes (CIV Ag) **Provide Materials:** Test Device、Sterile cotton swab、Disposable dropper、Dilution Buffer

Features: simple operation, quick results

Catalog Number	Product Name	Test purpose	Sensitivity	Specificity
FZCC001-10	Rapid CDV Ag Test Kit	CDV Ag	98%	99%
FZCC009-10	Rapid CAV Ag Test Kit	CAV Ag	97%	99.5%
FZCC013-10	Rapid CDV/CAV Combined Ag Test Kit	CDV Ag + CAV Ag	97%	99%
FZCC003-10	Rapid CIV Ag Test Kit	CIV Ag	98.5%	98%

Test steps:

- 1. Line C is not displayed as an invalid board;
- 2. Look at the results within 10–15 minutes, the results will not be used for reference after 15 minutes.

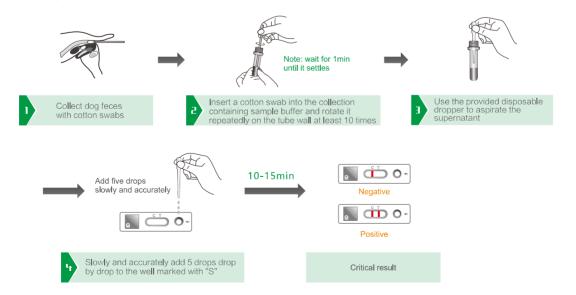

Test sample: Stool 、Rectal swab

Provide Materials: Test Device, Sterile cotton swab, Disposable dropper, Dilution Buffer

Catalog Number	Product Name	Test purpose	Sensitivity	Specificity
FZCC002-10	Rapid CPV Ag Test Kit	CPV Ag	98.0%	97.0%
FZCC010-10	Rapid CCV Ag Test Kit	CCV Ag	98.2%	98.0%
FZCC014-10	Rapid CPV/CCV Ag Test Kit	CPV/CCV Ag	98.0%	97.0%
FZCC019-10	Rapid Giardia Ag Test Kit	Giardia Ag	97.4%	98.0%

Test steps:

- 1. Line C is not displayed as an invalid board;
- 2. Look at the results within 10-15 minutes, the results will not be used for reference after 15 minutes.

Rapid FIV Ab+Felv Ag Combined Ag Test Kit

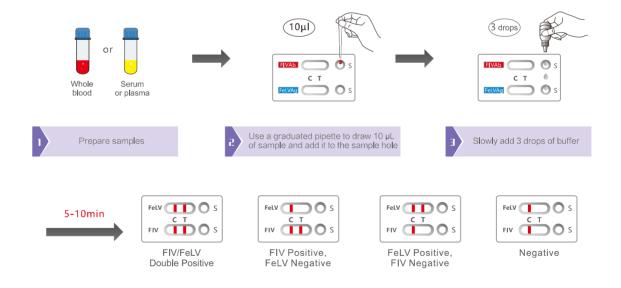

Objective: To detect the antibody of feline immunodeficiency virus and feline leukemia virus antigen at the same time

Test sample: Whole blood, serum, or plasma

Provide Materials: Test Device, Sterile cotton swab, Dropper, Dilution Buffer

Features: One-step detection, efficient and convenient; High accuracy; Economical inspection cost

Test steps:

► Note: For the sample volume specified in the instruction manual, the black line on the capillary represents 10µL.

(addition of too much or too little sample will produce wrong results, so strictly follow the specified sample volume $(10\mu L)$.
